

Compact. Reliable. System-tested. Micro data center in a security safe.

Growing decentralization is increasing the demands placed on IT infrastructures' physical security.

Complete protection in a minimal space

Data may be highly sensitive, especially, for example, when it is the personal data of citizens that needs to be safeguarded against theft, or the IT systems of critical infrastructures that need protection from such physical threats as dust, fire and splashed water. Thanks to its enclosure, the RiMatrix Micro Data Center Level E can meet these challenges. The numerous options available, coupled with the opportunity of buying, permit a high degree of flexibility at the point of use.

The security safe is a stand-alone solution and, thanks to its modular structure, permits not only the retrofitting of existing IT structures but also installation at locations without a classic IT environment, away from the data center or server room. The RiMatrix Micro Data Center Level E is also ideal for lights-out operation, thanks to its decentralized application and remote monitoring capability.

SOFTWARE & SERVICES

FRIEDHELM LOH GROUP

The benefits for you:

- System-tested security and a high level of protection for your infrastructure; testing has been carried out by accredited test institutes and confirmed with test reports
- Future-proof investment, thanks to the options of extendibility, dismantling and re-assembly
- Modified air baffle plates for optimum air routing, for efficient cooling of the RiMatrix Micro Data Centers Level E
- Power supply guaranteed via PDUs
- Monitoring, fire alarm and extinguishing systems are also available as options

Technical features:

- Usable height units: 42 and 47 U
- Rack depth up to 1200 mm
- Cooling output from 3 kW to 30 kW

Comprehensive protection from countless threats
